DETAILED ACTION

Allowable Subject Matter

Claims 1-18 are allowed.

The following is an examiner's statement of reasons for allowance:

The independent claim 1 recites "said comparison component operable to compare said present utility voltage value with a present nominal operating voltage value of said device; a configuring component in data communication with said comparison component and responsive to said present utility voltage value falling within an upper half of a first range having a centre point higher than said present nominal operating voltage value and lower than an upper out-of-tolerance voltage value of said device, configuring said power supply apparatus to supply power at a voltage within said first range; and said configuring component further responsive to said present utility voltage value falling within a lower half of a second range having a centre point lower than said present nominal operating voltage value and higher than a lower out-of-tolerance value of said device, configuring said power supply apparatus to supply power at a voltage within said second range". This feature in combination with the remaining claimed structure avoids the prior art of record.

The independent claims 7 and 13 recite "responsive to said present utility voltage value falling within an upper half of a first range having a centre point higher than said present nominal operating voltage value and lower than an upper out-of-tolerance voltage value of said device, configuring, by a configuring component, said power supply apparatus to supply power at a voltage within said first range; and responsive to

said present utility voltage value falling within a lower half of a second range having a centre point lower than said present nominal operating voltage value and higher than a lower out-of-tolerance value of said device, configuring, by said configuring component, said power supply apparatus to supply power at a voltage within said second range".

This feature in combination with the remaining claimed structure avoids the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 6,054,847 to Garcia et al. and U.S. Patent 6,239,407 to Thommes.
